FOREWORD

AS-11 complements AC-10. Where AC-10 includes the personnel of the Board of Governors, councils, boards, and technical and regional committees, AS-11 includes the personnel of the Council on Codes and Standards (CCS), boards, and committees of the Codes, Standards, and Conformity Assessment Programs. The information contained herein reflects the Codes and Standards committee membership and staff assignments as of September 4, 2001.

A Society activity of prime importance has been the development, promulgation, and administration of the Codes, Standards, and Conformity Assessment Programs. In the ASME Constitution, Article C2.1 states:

C2.1.1 The purposes of this Society are to:

- Promote the art, science, and practice of mechanical engineering and the allied arts and sciences;
- Encourage original research;
- Foster engineering education;
- Advance the standards of engineering;
- Promote the exchange of information among engineers and others;
- Broaden the usefulness of the engineering profession in cooperation with other engineering and technical societies; and
- Promote a high level of ethical practice.

In all professional and business relations the members of the Society shall be governed by the Code of Ethics as stated in the Society Policies.

C2.1.2 The Society may approve or adopt any report, standard, code, formula, or recommended practice, but shall forbid and oppose the use of its name and proprietary symbols in any commercial work or business, except to indicate conformity with its standards or recommended practice.

ASME has a unique organizational structure which provides a great deal of autonomy for its Codes, Standards, and Conformity Assessment Programs, and yet provides the advantages inherent in a professional society of committees, boards, and councils that enhance due process. These inherent advantages result from the multifaceted purposes of the Society.

The Codes, Standards, and Conformity Assessment Programs include:

Council on Codes and Standards
Board on Conformity Assessment
Board on Council Operations
Board on Hearings and Appeals
Board on International Standards
Board on Metrication
Board on Nuclear Codes and Standards
Board on Performance Test Codes
Board on Pressure Technology Codes and Standards
Board on Safety Codes and Standards
Board on Standardization

Annually, the Board of Governors assigns the duties associated with the Codes, Standards, and Conformity Assessment Programs to the Council on Codes and Standards (CCS). This Council is responsible for Codes and Standards planning; reflection of advancing technological changes and safety needs in the structure; responsiveness to investigations and suggestions; providing procedural due process, review, and comment; and/or testimony on proposed legislation relating to ASME's codes, standards, and/or conformity assessment activities.

The supervisory boards (Conformity Assessment, Nuclear Codes and Standards, Performance Test Codes, Pressure Technology Codes and Standards, Safety Codes and Standards, and Standardization), within their respective scopes, have the following duties:

to assess the need for codes, standards, and related conformity assessment activities;

to determine the necessary charters of standards committees;
to interface with the American National Standards Institute, Inc. (ANSI);
to approve codes, standards, and conformity assessment criteria on behalf of the Society;
to recommend policy changes to the CCS;
to interact with regulatory bodies.

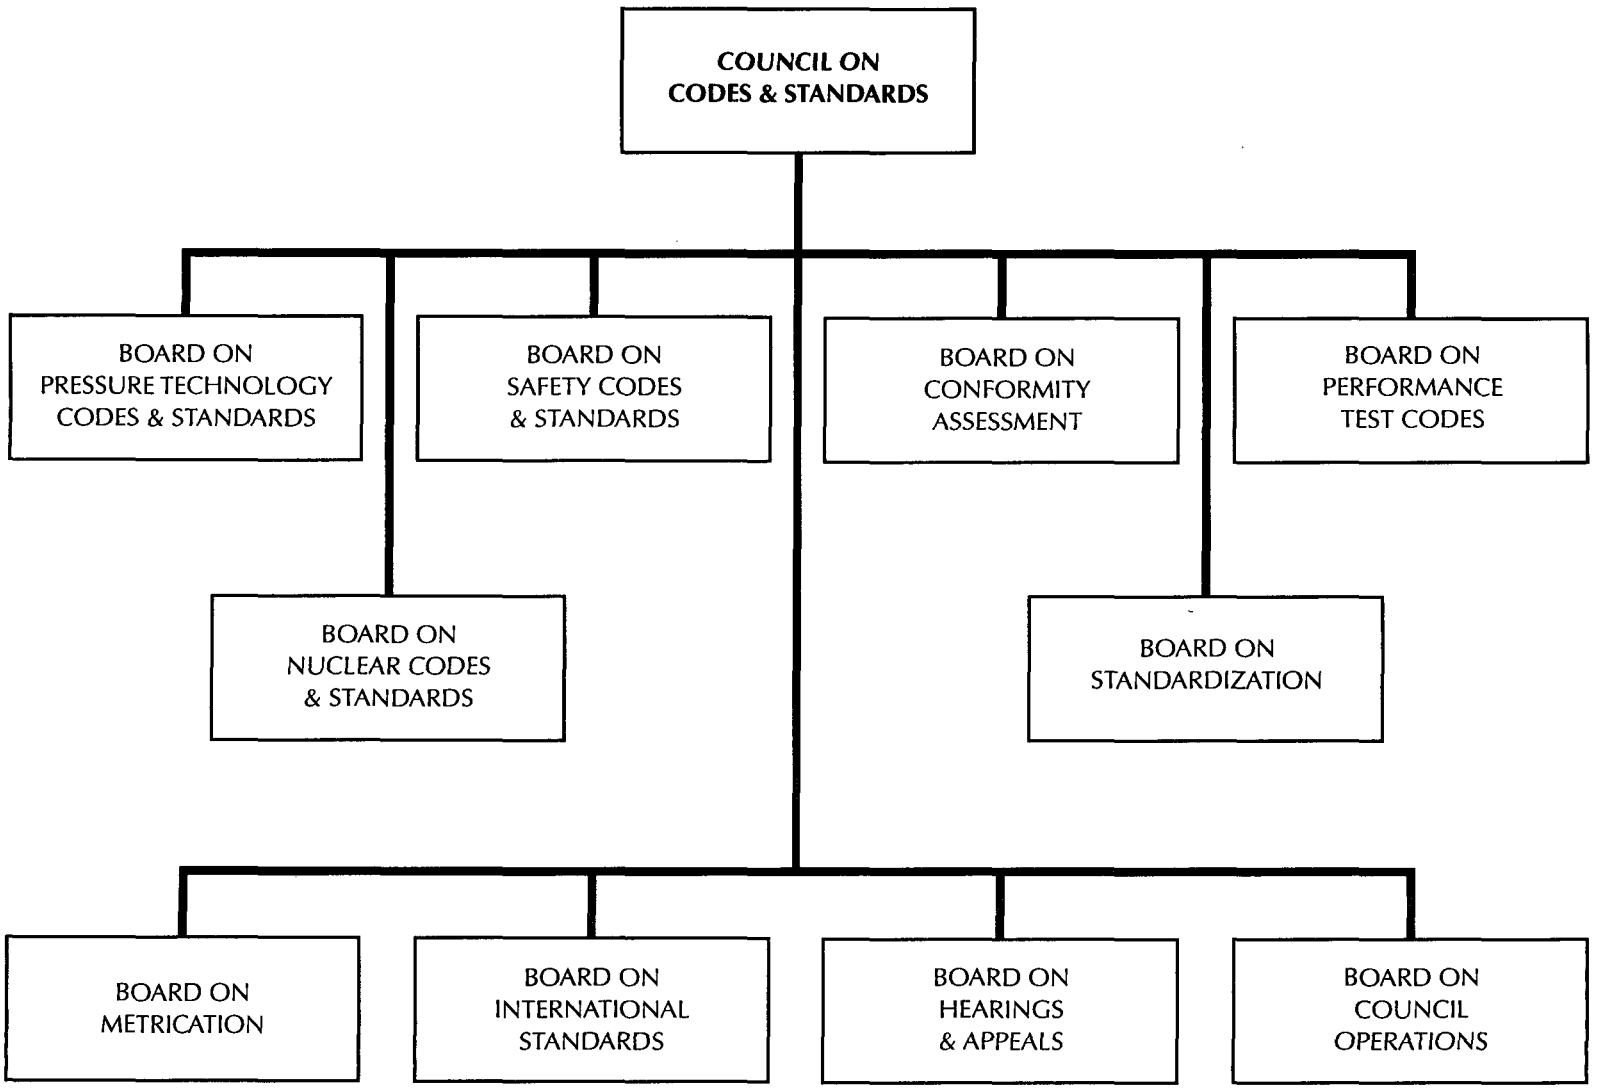

ASME develops standards under the ANSI Accredited Organization Method. The supervisory boards have standards committees using this method. As part of the overall public service role of Codes and Standards, it is the role of the supervisory boards to assure that any document presented to the Society whose scope interfaces with that of an ASME committee is reviewed under the ANSI Canvass Method.

Included in this publication are lists of committees, arranged by the board to which each committee reports, and a listing of the ASME Codes and Standards staff. For Society related codes and standards inquiries relative to the CCS, boards, standards committees, or accreditation and certification committees, the staff person indicated should be contacted. It is the responsibility of this staff to function within the parameters of B5.1.4 of the Society's Bylaws:

> B5.1.4 The primary role of staff assigned to boards and committees is to implement actions that are required to meet the objectives of the board or committee on a continuing basis. Working under broad lines of policy established by the board or committee, the staff will initiate programs, actively engage in the work, and make operating decisions necessary to carry forward the programs in a dynamic and efficient manner.

BOARD ON NUCLEAR CODES AND STANDARDS

O10000000

To manage all ASME activities related to codes, standards, and accreditation programs directly applicable to nuclear facilities and technology. To manage the development of codes, standards, and accreditation programs developed by committees under its jurisdiction, including the approval and discharge of personnel of the committees. To approve for ASME all codes, standards, and accreditation programs prepared by committees under its jurisdiction. Approval by the board of a specific code, standard, or accreditation program shall be based on assurance that an ASME committee that developed the code or standard has operated under procedures that have been accredited as meeting the criteria for American National Standards. To assess the need for codes, standards, and related accreditation activities. To develop recommended policies for consideration by the Council on Codes and Standards. To develop recommended ASME positions with interfacing bodies, including regulatory agencies, on matters related to nuclear facilities and technology. To develop Society positions for proposed standards, which are directly applicable to nuclear facilities and technology, submitted under any nationally accepted method for developing voluntary standards. To assure that all committees within the scope of the board are providing procedural due process.

MAIN COMMITTEE OF COMMITTEE ON NUCLEAR AIR AND GAS TREATMENT EQUIPMENT

O10200000

To develop, review, maintain, and coordinate codes and standards for design, fabrication, installation, testing, and inspection of equipment for air and gas treatment for nuclear facilities. As used herein, gas treatment includes both HVAC and gas processing. HVAC is the moving and conditioning of air which is supplied, exhausted, or recirculated into and from an enclosed space to maintain a prescribed environment. These conditions include pressure, temperature, humidity, and contaminants. Gas processing is the transportation of gas and the separation, isolation, and disposal of its constituents by physical, mechanical, chemical, delay, electrical, and thermodynamic means.

COMMITTEE ON QUALIFICATION OF MECHANICAL EQUIPMENT USED IN NUCLEAR FACILITIES

O10800000

To develop and maintain codes and standards for the qualification of active mechanical equipment to be used in nuclear facilities. Qualification is the demonstration of the capability of the equipment to perform its specified function(s) over the expected range of internal and external conditions it may experience during its service life, including aging of the equipment. This includes the following specific activities: develop and maintain standards on qualification of active mechanical equipment, i.e., equipment that includes parts that have the capacity to move; coordinate with committees of other organizations that are preparing and maintaining qualification standards; coordinate, from the perspective of qualification, with other ASME committees developing and maintaining construction and inservice codes and standards.

PTC EXECUTIVE COMMITTEE
P01010000
The Performance Test Codes Executive Committee acts in an advisory capacity for the Board on Performance Test Codes.
Staff Secretary, William O. Hays

PTC 1 GENERAL INSTRUCTIONS
P01020000
The agreed standard form, arrangement, and content of individual test codes, intended as insstructions to writers and revisions of codes; rules common to most test codes for planning, conducting, and reporting tests, not made mandatory by this code, but recommended for inclusion in individual codes and to be made mandatory therein; and recommendations and material informative to users of test codes.

PTC 3 FUELS
P01060000
Specifies standard methods for determination of those chemical and physical properties which serve as indicators of the value of those fuels that are required in tests of equipment using such fuels as a source of energy for generating heat or power.
Staff Secretary, Jack H. Karian

PTC 4 FIRED STEAM GENERATORS
P01070000
Gives instructions for testing combinations of apparatus for producing, furnishing, or recovering heat thus made available. For the purpose of this code, such a unit may include a boiler, water walls, water floor, water screen, superheater, reheater, economizer, air heater, furnace, and fuel-burning equipment. Economizers and air heaters are not included when the heat absorbed is not returned to the unit.

PTC 7.1 ROTARY PUMPS

P01130000
Procedures for determining performance characteristics of general purpose rotary positive displacement pumps. Code applies to tests of the pump only. It does not apply to hydraulic fluid power pumps.
Staff Secretary, George Osolsobe

PTC 7.2 POWER PUMPS

P01135000
Procedures for determining performance characteristics of reciprocating power pumps. Code does not establish acceptance criteria for performance of the pump. Code provides for four levels of test: Level I (mechanical run), Level II (mechanical run and capacity), Level III (mechanical run, capacity, and power), and Level IV (NPSH).
Staff Secretary, George Osolsobe

PTC 8.2 CENTRIFUGAL PUMPS

P01140000
Provides standard directions for conducting and reporting performance tests on centrifugal pumps, including those of the mixed flow and axial flow types. The code applies to the testing of pumps utilizing liquids or mixtures of miscible liquids having Newtonian viscosity characteristics.
Staff Secretary, George Osolsobe

PTC 10 COMPRESSORS AND EXHAUSTERS

P01160000
Provides standard directions for conducting and reporting tests on compressors or exhausters of the centrifugal, mixed flow, or axial flow types in which the change in the gas specific weight exceeds 7%.

PTC 11 FANS

P01170000
To provide standard directions and rules for the conduct and report of tests for large industrial fans. The tests include determination of pressure, quantity, shaft horsepower, and efficiency, all under specified conditions of speed and fluid density.
Staff Secretary, Jack H. Karian
Steven P. Nuspl AK

PTC 12.1 FEEDWATER HEATERS

P01180000

SUBCOMMITTEE ON NUCLEAR POWER (SC III)
N20070000
To develop, review, and maintain Section III, *Division 1, of the Boiler and Pressure Vessel Code*. The rules of this section constitute the requirements for the construction of nuclear power plant items, such as vessels, storage tanks, piping, pumps, valves, core support structures, and component supports, for use in, or containment of, portions of the nuclear power system or containment system of any power plant. This scope is intended to cover new construction and includes consideration of mechanical and thermal stress due to cyclic operation. This scope excludes the construction of accessories or devices which are not pressure retaining parts or which do not act as core support structures or component supports. This scope excludes instruments or permanently sealed fluid filled tubing systems furnished with instruments.

JOINT ACI-ASME COMMITTEE ON CONCRETE COMPONENTS FOR NUCLEAR SERVICE (SC-3C)
N20080000
To develop, review, and maintain Section III, Division 2, of the Boiler and Pressure Vessel Code. The mission of this committee is to establish rules in the form of a code for the design, construction, inspection, and testing of composite concrete and steel reactor vessels, containments, storage tanks, and critical associated component supports, and of graphite core supports for nuclear power reactors; to interpret the rules when questions regarding their intent arise; and to periodically update provisions, making full use of the expedited procedures (ACI) for revisions of codes as necessary.

A13 SCHEME FOR THE IDENTIFICATION OF PIPING SYSTEMS

L01020000

Identification of piping systems, in industrial and power plants, which are not buried in the ground, and with special reference to personnel hazards, including conduits for the transport of gas, liquids, semiliquids, or fine particles of dust, i.e., dust in a dry form (not in a slurry) of less than 300 microns in size. The transported material can be flammable, combustible, or corrosive. This standard is also recommended for pipe identification in commercial and institutional installations and in buildings used for public assembly.

B15 SAFETY STANDARDS FOR MECHANICAL POWER TRANSMISSION APPARATUS

L01080000

Protection of people from the hazards associated with equipment used in the mechanical transmission of power, which equipment has been installed and is operating in the intended use. The entire power train is included, comprising the sources of mechanical power, the associated and intermediate equipment, and the driven machines up to but excluding the point(s) of operation of locomotion. Units in such power trains include but are not limited to engines, motors, reducers, shafts, belts, sheaves, pulleys, gears, chains, sprockets, cables, clutches, cams, pistons, cranks, flywheels, counterweights, and other revolving, oscillating, reciprocating, or other moving parts.

B20 SAFETY STANDARDS FOR CONVEYORS AND RELATED EQUIPMENT

L01100000

The design, construction, installation, maintenance, inspection, and operation of conveyors and conveying systems in relation to accident hazards. Conveyors covered by this standard include such items as power conveyors, gravity conveyors, pneumatic tubes, skip hoists, vertical reciprocating conveyors, and power unloading scoops. This standard does not apply to industrial poweredtrucks, tiering machines, cranes, derricks, hoists, power and hand shovels, bucket drag lines, moving stairways, dumbwaiters, manlifts, and platform elevators designed to carry passengers or the elevator operator.

SLEW RING BEARINGS

C84000000
To produce a "Design Guide for Slew Ring Bearings" with the intent of increasing the user's knowledge of this product and its application so that the user and manufacturer can interface most effectively. This document will standardize certain symbols, definitions, load ratings, and/or capacities, as well as acceptance and application criteria. Topics of internal bearing design, manufacture, heat treatment, and material will be covered, in addition to critical application parameters such as mounting bolts, supporting structures, gears, and other supporting equipment and devices.

Y14 ENGINEERING DRAWING AND RELATED DOCUMENTATION PRACTICES

C64000000

The development and maintenance of national standards for defining and documenting a product throughout its life cycle and related certification activities. This shall be accomplished by: 1) recognizing the continuing need for existing standards regardless of the source medium (e.g., paper, film, and digital) or method of preparation (e.g., manual or computer generated); 2) providing standardization where a variety of practices exist within industry and government; 3) providing standards for new concepts and technologies; and 4) supporting and coordinating development and harmonizing of standards with responsible standardization bodies, including ANSI, ISO, and government agencies.
