Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Editor's note: Some CJK Unified Ideographs from Extension C have KP sources but are not shown in these charts for lack of fonts. This, along with the format, will be fixed in the next edition of this standard. In addition, the KP source information is already available in the source reference file.

Page 28, Clause 34, Code Tables and list of character names (now renamed 'Code charts and list of character names')

Replace first paragraph by following.

Detailed code charts and list of character names for the BMP, SMP, SIP, and SSP are shown on the following pages.

Code charts are arranged by blocks which may span several pages.

Each code chart is followed by a corresponding character names list, except the CJK UNIFIED IDEOGRAPHS blocks and the HANGUL SYLLABLES blocks.

34.1 Code chart

Code charts are presented in arrays of graphic symbols representing the characters organized in one to sixteen columns of sixteen symbols each. The lower digit of the coded representation is indicated in the left margin while the remaining upper digits are indicated in the top margin. The full coded representation for each character is also indicated under each representative graphic symbol.

34.2 Character names list

The character names lists contain both normative and informative information. The following information items are normative:

- Character code position,
- Associated character name,
- Character alias (one preceded by '※') which is a unique and stable alternate name for a character.

NOTE – Characters are given a normative character alias in certain cases where there is a defect in the character name. They do not replace the character name, but rather allow users to formally refer to the character without requiring the use of a defective name. These aliases follow the same syntax as character names.

All other information is informative and may contain:

- Graphic symbol associated with the character.
- Subheads grouping various subsets of a given block. For example, the LATIN-1 SUPPLEMENT block contain "Latin-1 punctuation and symbols", "Letters", and "Mathematical operator".
- Explanatory text describing context for a subhead or a whole block.
- Informative aliases preceded by '=' indicate alternate names for characters.
- Cross references, preceded by '→' indicates a related character of interest.
- Information about languages, preceded by '•' indicates a non exhaustive list of languages using that character. For bicameral scripts, the information is only provided for the lower case form of the character.
- Case mappings, also preceded by '•', only when it cannot be derived simply from the names.
- Other information about a character, also preceded by '•', describing name peculiarity, historical consideration, or any noteworthy aspect of a character.
- Decompositions, preceded by '≡', or '≈' describing various mapping between characters.
