Foreword

At the time of preparation of this Standards Publication, it was evident that there was an increasing move in the electrical industry toward the use of the Universal Product Code (UPC) product identification system in all types of business communications media (verbal, written, bar code and Electronic Data Interchange [EDI]). The product identification system presented in this document is based on the UPC system.

The UPC system provides for an eleven digit character string. The string consists of a six digit manufacturer's number assigned by the Uniform Code Council plus a five digit item identifier assigned by the manufacturer. These eleven digits uniquely identify a manufacturer's product. Depending on the specific bar code system to be used, this number may be preceded by additional characters or followed by a check digit.

With the growing use of the UPC numbering system in the industry and the desire for item identification, it became apparent that in order to serve the needs of customers of the electrical industry, some type of standardization of the five digit item identification numbers for conduit products was desirable. The numbering scheme set forth in this publication was established by the Steel Rigid Conduit and EMT Section of NEMA and is intended to fulfill the need for unique identification of the manufacturer as well as the need for uniform item identification.

In the preparation of this Standards Publication, input of users and other interested parties has been sought and evaluated. Inquiries, comments, and proposed or recommended revisions should be submitted to the concerned NEMA product subdivision by contacting the:

Vice President, Engineering Department
National Electrical Manufacturers Association
2101 L Street, N.W., Suite 300
Washington, D.C. 20037

Scope

This Standards Publication sets forth item identification numbers for metallic tubular conduit products. The products covered are Galvanized Rigid Conduit (GRC), Electrical Metallic Tubing (EMT), Intermediate Metal Conduit (IMC), Galvanized Rigid Aluminum Conduit, including elbows, threaded couplings and nipples customarily furnished on or with the conduit.

The numbers listed are intended to cover like products produced by multiple manufacturers on a repetitive basis.

The identification numbers are intended for use in bar coding, EDI, and other business communications.

Section 2
DESCRIPTION OF PRODUCTS COVERED

Products whose identification numbers are listed in this publication are generally covered by Articles 345, 346, and 348 of the National Electrical Code (N.E.C.) and described by the following standards*:

2.1 RIGID METAL CONDUIT AND COUPLINGS (GRC)

Underwriters Laboratories, Inc., Standard UL-6

American National Standards Institute, ANSI C80.1

2.2 INTERMEDIATE METAL CONDUIT AND COUPLINGS (IMC)

Underwriters Laboratories, Inc., Standard UL-1242

American National Standards Institute, ANSI C80.6

2.3 ALUMINUM RIGID CONDUIT AND COUPLINGS

Underwriters Laboratories, Inc., Standard UL-6

American National Standards Institute, ANSI C80.5

2.4 ELECTRICAL METALLIC TUBING (EMT)

Underwriters Laboratories, Inc., Standard UL-797

American National Standards Institute, ANSI C80.3

EMT Couplings and Connectors:

Underwriters Laboratories, Inc., Standard UL514-B

Authorized Engineering Information 3-4-1991.

*Refer to Section 1 for listing of standard's titles and respective organization.

Section 3
DESCRIPTION OF NUMBERING SCHEME

3.1 UPC NUMBERING SYSTEM AS A MEANS OF PROVIDING FOR UNIQUE PRODUCT IDENTIFICATION

The UPC code uses a six digit number to identify each manufacturer, which is coupled with a five digit number to identify each of the manufacturer's products. The combination of these elements into one eleven-digit number—the UPC number—identifies one, and only one item.

As indicated above, the first six digits in the UPC code are the manufacturer identification number. Upon application and payment of the appropriate fee, the Uniform Code Council, Inc. (UCC) will assign a manufacturer identification number. The assignment of a manufacturer identification number by one agency (UCC) prevents the issuance of the same number to two different manufacturers or two different numbers to the same manufacturer (except in specific situations defined in the UCC guidelines).

The second part of the UPC code identifies each product a manufacturer produces. This is a five digit number which may be selected and maintained by the manufacturer. The UPC Industrial Code Guidelines Manual outlines concepts and guidelines for use in assigning item numbers in an orderly and efficient manner. The five-digit number uniquely identifies each product a manufacturer produces and will accommodate 100,000 items (00000 - 99999).

Authorized Engineering Information 3-4-1991.

3.2 Commodity Identification Through the Use of Standardized Item Identifiers

The use of the complete eleven-digit UPC Code permits the unique identification of products. With the use of the standard industry five-digit item numbers presented in this publication, a means is provided to those in the industry for uniform coding and identification of like conduit products. For example:

Manufacturer ABC 023451	10' - " EMT 12345	Check Digit* 6
Manufacturer XYZ 054321	10' - " EMT 12345	Check Digit 0

To uniquely identify 10' - " EMT from a specific manufacturer one would specify 023451-12345 or 054321-12345.

When this number is used with a bar code symbology a twelfth character (check digit) is used.

Authorized Engineering Information 3-4-1991.

*Refer to Section 1, UPC Symbol Specification Manual, for methodology in determining the check digit.

Section 4
PRODUCT IDENTIFICATION NUMBERS

4.1 Product Identification Numbers by Product Category are as listed in Table I.

4.2 Product Identification Numbers by Numerical Hierarchy are as listed in Table II.

Section 6
FUTURE ADDITIONS AND MAINTENANCE OF NUMBERING SYSTEM

To aid in communications between manufacturer, manufacturer representative, distributor, contractor and others, this listing has been made as complete as possible and is intended to provide identification numbers for tubular metallic conduit products made on a repetitive basis.

However, due to oversight during the development of this publication, or new product introductions, the listing of product identification numbers appearing in this publication may be incomplete. Therefore, provision has been made to permit the inclusion of additional item numbers.

A company desiring a new item number because of an omission or introduction of a new product should contact the NEMA Staff Executive for the Steel Rigid Conduit and EMT Section, who will maintain the list of numbers and their respective product descriptions. It is emphasized that the product identification numbers listed in this publication are intended to include only like products produced by multiple manufacturers. They are intended to serve a need by the industry where such products are manufactured on a repetitive basis. Proprietary products, special ordered products, etc., may not be appropriate for inclusion. Also, it should be emphasized that this is strictly a voluntary system and a manufacturer may utilize any number of their choice to identify standard or non-standard products. However, if listing in the system covered by this document is requested, the Staff Executive will propose unused numbers from a reserved block of numbers which the requestor will be free to use as they deem appropriate.

A unique product identification number will be required for each identifiable saleable unit, whether it is a package of 1, 3, 5, 10, etc. Numbers in the system covered in the document are intended to be assigned to package quantities that have gained common usage in the industry.

It should be understood that the proposing of a product identification number by the NEMA Staff Executive does not necessarily mean that it will be approved for inclusion in the next revision of the document.

The Committee responsible for maintenance of this publication will periodically review the list of proposed new numbers to determine whether the product is produced on a repetitive basis by multiple manufacturers and therefore appropriate for inclusion in the next revision of the publication.

Authorized Engineering Information 3-4-1991.

NEMA STANDARDIZATION

The purpose of NEMA Standards, their classification and status are set forth in certain clauses of the NEMA *Standardization Policies and Procedures* manual and are referenced below:

Purpose of Standards

National Electrical Manufacturers Association Standards are adopted in the public interest and are designed to eliminate misunderstandings between the manufacturer and the purchaser and to assist the purchaser in selecting and obtaining the proper product for their particular needs. Existence of a National Electrical Manufacturers Association Standard does not in any respect preclude any member or nonmember from manufacturing or selling products not conforming to the standard.

(Standardization Policies and Procedures, p. 1)

Definition of a Standard

A standard of the National Electrical Manufacturers Association defines a product, process or procedure with reference to one or more of the following: nomenclature, composition, construction, dimensions, tolerances, safety, operating characteristics, performance, rating, testing, and the service for which they are designed.

(Standardization Policies and Procedures, p. 2)

Dimensions

Where dimensions are given for interchangeability purposes, alternate dimensions satisfying the other provisions of the Standards Publication may be capable of otherwise equivalent performance.

(Standardization Policies and Procedures, p. 8)

Categories of Standards

National Electrical Manufacturers Association Standards are of three classes:

1. NEMA Standard, which relates to a product, process or procedure commercially standardized and subject to repetitive manufacture, which standard has been approved by at least 90 percent of the members of the Subdivision eligible to vote thereon;
2. Suggested Standard for Future Design, which may not have been regularly applied to a commercial product, but which suggests a sound engineering approach to future development, which standard has been approved by at least two-thirds of the members of the Subdivision eligible to vote thereon.
3. Adoptive Standard, which is adopted in whole or in part from the standards of another organization, either domestic, regional, or international.

(Standardization Policies and Procedures, pp 7 & 16)

Authorized Engineering Information

Authorized Engineering Information consists of explanatory data and other engineering information of an informative character not falling within the classification of NEMA Standard or Suggested Standard for Future Design, which standard has been approved by at least two-thirds of the members of the Subdivision eligible to vote on the standard.

(Standardization Policies and Procedures, pp. 7 & 16)

Official Standards Proposal

An Official Standards Proposal is an official draft of a proposed standard which is formally recommended to an outside organization(s) for consideration, comment and/or approval, and which has been approved by at least 90 percent of the members of the Subdivision eligible to vote thereon. *(Standardization Policies and Procedures, pp 7 & 16)*

Identification of Status

Standards in NEMA Standards Publications are identified in the foreword or following each standard as "NEMA Standard" or "Suggested Standard for Future Design." These indicate the status of the standard. These words are followed by a date which indicates when the standard was adopted in its present form by the Association.

The material identified as "Authorized Engineering Information" and "Official Standards Proposal" is designated similarly.
