# INFORMATION TECHNOLOGY – OPEN SYSTEMS INTERCONNECTION – SYSTEMS MANAGEMENT: STATE MANAGEMENT FUNCTION

## TECHNICAL CORRIGENDUM 2

## CLARIFICATION OF STATE CHANGE EVENT

### 1) Subclause 8.1.3.1

*Replace paragraph:*

"The state attribute group is defined as an empty attribute group. It provides a means of referring to the collection of all state attributes of a managed object. The intent of the state attribute group is to contain the generic and specific state attributes of a managed object when included in the managed object class definition. When the state attribute is read, the set of attribute identifiers and values which are members of the state attribute group will be returned."

*with:*

"The state attribute group is defined as an empty attribute group. It provides a means of referring to the collection of all state or status attributes of a managed object. The intent of the state attribute group is to contain the generic and specific state or status attributes of a managed object when included in the managed object class definition. When the state attribute group is read, the set of attribute identifiers and values which are members of the state attribute group will be returned."

### 2) Subclause 8.2

*Replace* "state attribute" *with* "state or status attribute" throughout the subclause (7 occurrences).

*Replace* "state attributes" *with* "state or status attributes" throughout the subclause (2 occurrences).

### 3) Subclause 8.4

*Change* "state attribute" *to* "state or status attribute" throughout the subclause (3 occurrences).
