Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Amendment 25 to ISO/IEC 14496-4:2004 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 29, *Coding of audio, picture, multimedia and hypermedia information*.

Information technology — Coding of audio-visual objects —

Part 4:
Conformance testing

AMENDMENT 25: LASeR and SAF conformance

In Clause 2 Normative References, add reference to ISO/IEC 14496-20:

ISO/IEC 14496-20, *Information technology — Coding of audio-visual objects — Part 20: Lightweight Application Scene Representation (LASeR) and Simple Aggregation Format (SAF)*

After 4.14, add the following subclause:

4.15 LASeR Conformance

4.15.1 Bitstream conformance

4.15.1.1 Conformance Requirements

LASeR streams shall comply with the specifications in clause 12 of ISO/IEC 14496-20.

4.15.1.2 Measurement procedure

Syntax of the LASeR stream shall meet the requirements of clause 12 of ISO/IEC 14496-20.

4.15.1.3 Tolerance

There is no tolerance for bitstream syntax checking. The diagnosis is pass or fail.

4.15.2 Terminal conformance

4.15.2.1 Conformance Requirements

The terminal shall recover the LASeR access units in the LASeR Decoding Buffer bit-exact as constructed by the LASeR encoder.

4.15.2.2 Measurement Procedure

The LASeR Access Units recovered from this conformance point shall be strictly identical to the Access Units stored in the corresponding LASeR track in the test SAF file.

4.15.2.3 Tolerance

There is no tolerance. The diagnosis is pass or fail.

4.15.3 Scene Graph Conformance

4.15.3.1 Conformance Requirements

The scene shall be reconstructed and updated by LASeR Command streams, and event/scripting execution as specified in ISO/IEC 14496-20.

4.15.3.2 Measurement procedure

The scene graph shall be the same as the scene graph of a reference implementation at any time. The procedure to test is to make scene dumps according to the format described in this document at some key points in time. The test material must provide the original LASeR bitstream as well as the scene dumps for the same key points in time. The key points will be determined by the author of the test sequence according to the following criteria:

- in the case of LASeR Command streams, the scene graph shall be checked after the CTS of each command.
- in the case of events or scripting, the scene graph shall be checked every TBD ms. The assumption is that interpolation of values are performed at the same rate shifted by TBD ms.

4.15.3.3 Tolerance

The accuracy of the time stamp at which the values will be updated shall be tested according to the level definition.

Arithmetic precision shall be tested according to the level definition.

4.15.4 LASeR Test Sequences

The next subclause documents the test sequences. The table being too big, it is split in two tables. There is one line per sequence, and one column per element type in LASeR. Table AMD25.1 shows information on elements a to lsr:Delete. Table AMD25.2 shows information on elements lsr:Insert to rect. Table AMD25.3 shows information on elements saf:* to video. The content of each cell is the number of elements of that type in that sequence.

Table AMD25.1 – Presence of elements a to rect in test sequences
